

Data Sheet: Work Examiner Standard Edition

Overview

One of the main problems in any business is control over the efficiency of employees. Nowadays it is impossible to imagine an organization that does not use computers.

Work Examiner Standard is a complex solution for controlling employees' office hours. Work Examiner Standard allows organizations to quickly and at minimum cost monitor and analyze the activity of their employees on the Internet and in various applications.

Work Examiner Standard is designed for medium and small businesses and in the first place oriented towards the heads of enterprises and structural subdivisions, IT specialists, system administrators.

Key Benefits

Work Examiner Standard will allow you to:

- **Increase the efficiency of employees**
- **Reduce the use of computers for personal needs**
- **Plan the amount of time and human resources more precisely**

Get the answers to the following questions:

- **What web sites do your employees devote most time to?**
- **Which one of your employees spends most time in the Internet?**
- **How many hours a week has the employee worked?**
- **Who of your employees spends most time using chats and playing games?**
- **Are the employees using the computer or are they distracted by some other business?**
- **At what hours is the employees' work the most efficient?**
- **Who comes late for work or leaves early?**
- **Who and when used the computer without proper authorization?**
- **On what days does the employee spend more time at work and what are the days the employee spends less time there?**

Features

Internet Monitoring.

With Internet Monitoring you can find out which one of your employees spends the most amount of time browsing the Internet, what web sites they visit more often and when they do it. Using the report wizard you can flexibly generate Internet usage reports by different criteria. Basing on these data, you can also carry out comparative analysis of your employees' activity in the Internet: what employee or department spends more time using chat rooms and who spends less time doing it.

Unlike other Internet monitoring tools, Work Examiner not only collects data about the web site address and the date of the query, but also calculates the amount of time the user spent on the site (including active and passive time).

Application Monitoring.

Using Application Monitoring you can find out what applications and for how long are used by your employees. Many reports together with flexible features of filtering data by different criteria allow carrying out full and comprehensive analysis of the usage of applications in your company.

Attendance Tracking.

Work Examiner allows controlling the attendance of your employees and their daily, hourly or weekly activity at the computer. Thus, you can find out if anyone comes late, is absent from work, misuses the computer or leaves the workplace if the work should be carried out at the computer.

Internet Filtering.

Internet Filtering allows you to control your employees' access to the Internet. You can specify the sites your employees can visit and the time when they can do it. Using white and black lists you can flexibly, quickly and easily set the Internet access policy for your employees. The specified Internet access policy will be applied within a few minutes for all the computers in the organization.

Application Filtering.

Application Filtering allows blocking the start of applications for the employees. You can block the start of certain applications or block running all applications except for specified applications. If the application is not in the database, you can add it manually at any moment. For example, you can easily create a rule according to which the employees will be able to start games only at breaks.

Report Jobs.

With Report Jobs you can create scheduled reports. Each Report Job has highly flexible settings that allow including several reports into the job, customize the parameters of building the report for each specific report, set the reports so that they are published to a certain folder on the server in your network or sent to email and set a schedule for each job.

Data Sheet: Work Examiner Standard Edition

Real-Time Monitoring.

Using Work Examiner Standard you can see what your employees are doing at any moment. You can view a list of all active computers connected to the server. You can see the applications your employees are using at the moment and the web sites they are visiting. You can also check the attendance status of the user (whether the user is working at the computer or is away). Besides, when you view the list of user sessions you can filter users arranging them into groups.

Automatic Grouping.

Automatic grouping is provided for such objects as Web Site and Application. Basing on the auto grouping rules the objects can be automatically placed into one group or another when they are added to the Work Examiner database. In future the administrator can move a web site or an application to another group. Automatic grouping reduces the cost of total ownership of the system considerably.

Linked Reports.

With Linked Reports you can easily generate reports while being in different parts of the console for the object you are working with, whether it's a web site, an application, a user or a computer.

Ease of deployment.

Work Examiner Standard can be easily and quickly distributed in the network. You can install client modules remotely and don't need to be present on the computers where the program is being installed. Besides, Work Examiner Standard is supplied with a free Firebird database management system that is installed automatically.

Quick Reports.

With Quick Reports you can quickly view the statistics of your employees' work at the computer. Several views are available for viewing the statistics, providing the statistics for the Internet or applications. When viewing Quick Reports you can flexibly set the time interval for generating reports.

Report Export.

Each report created in the system can be exported to various formats. About ten different formats are available for export. Exporting reports allows the managers to view convenient reports about how Internet and applications are used on any computer.

Object Grouping.

To make the customizing and using of Work Examiner more convenient you can arrange such objects as User, Computer, Web Site and Application into groups. Using groups will allow you to set the policies for using Internet and applications more flexibly, and will also help you when you create reports on using the Internet and applications.

Distinctions from Professional edition

- Easy to deploy and manage (embedded db engine)
- May be used from 1 PC only (1 Console limit)
- Purchased with minimum 3 clients
- No roles & security features (1 admin user only)

System requirements

Work Examiner Console & Server:

- Windows 2000/XP/2003/Vista
- 256 Mb RAM
- 50 Mb disk space

Work Examiner Client:

- Windows 2000/XP/2003/Vista
- 128 Mb RAM
- 20 Mb disk space
